

Covid 19 pandemic necessitates a sudden shift to remote work environments – every day we are moving closer to completely borderless data access.

Is your organization prepared to address all the security threats that are coming?

WiFi

- Man in the Middle
- Vulnerable Security Protocol (e.g. WEP)
- Rogue Access Points
- Evil Twin
- War Driving
- Packet Sniffing

Enterprise VPN/Modem

- Low Performance leading to download of data for consumption

Web

- Personal access combined with business access
- Phishing
- Malware

Data Stores

- Use of local, removable drives
- Use of personal/public cloud accounts

Misconfiguration

- Rapid shift to remote workforce leads to data vulnerabilities

DAtAnchor revolutionizes data security by allowing encryption to seamlessly flow with the data, empowering companies to use their data in a controlled manner, invisible to employees [and their workflow].

Simple and high-performance encryption

One-click enforcement of automated governance and access control rules

Company retains control on data everywhere it travels, including dynamic revocation and real-time audit logs

Why DAtAnchor?

DAtAnchor allows universal transparent encryption – meaning you have control of who, when, and where your data is accessed using any access criteria you can imagine. It ensures sensitive data is unable to leave the business without consent, regardless of where it is consumed. DAtAnchor encrypts and restricts access based on dynamic boundaries, set by the company management.

Simple

- Built for remote and distributed access
- No change in existing workflows
- No plugins needed (no constant updates)
- Management sets parameters, DAtAnchor does the rest

Compliant

- Complies with CCPA, HIPAA, NIST, etc.
- Real-time monitoring, including logs of all access to data and dynamic revocation capabilities
- Any file out of context for any reason is rendered unreadable (cipher text)

Ready to Deploy

- Deployment within hours
- Runs seamlessly in the background without employees having knowledge
- Already built to work safely in cloud/network shares

Fill out the questionnaire at [this link](#) to assess your preparedness for [remote workforce](#).

Ask your MSP about DAtAnchor’s comprehensive solution that requires no training for the employees thanks to its simple, low-maintenance design. Encryption can save your organization from a costly attack – whether that be internal or external – during an especially vulnerable time for organizations shifting to a remote workforce. With DAtAnchor, you have access and control of your data, integrated within your current platform in a matter of hours.
